Central-VAR

One hub. Every match.

A Central-VAR system consolidates multiple Video Operations Rooms (VORs) into a single, centralized facility, creating a consistent and highly efficient officiating environment. With optional Referee Supervisor or VAR Instructor positions, organizations can strengthen decision quality, support referee development and maintain consistent VAR standards across every match.

Every decision. One command center.

A Central-VAR environment creates more than operational efficiency. By bringing match officials, Replay Operators, VAR Supervisors and Referee Instructors together in one location, federations can establish consistent workflows, strengthen decision quality and create a structured framework for referee development across the entire competition.

Key Benefits

- Centralized VAR operations
- Reduced travel and accommodation costs
- Consistent officiating standards across all matches
- Enhanced VAR supervision and decision quality
- Integrated referee training and development environment
- Flexible use of resources

Technical Considerations

- Dependency on primary and backup connectivity
- Complex WAN and signal routing requirements
- Remote referee communication integration required
- On-site RRA infrastructure remains required

Key Benefits & Capabilities

Operational Efficiency and Cost Reduction

- Reduced travel and accommodation costs
- Centralized staffing and resource allocation
- Streamlined matchday operations
- Simplified maintenance and technical support

Quality Assurance & Training

- Optional VAR Supervisor and Referee Instructor positions
- Consistent officiating standards across all matches
- Structured referee training and development
- Continuous monitoring and performance feedback

Scalability & Future Readiness

- Integration with remote production environments
- High scalability and built-in redundancy
- Flexible growth for future competition needs
- Lower environmental impact through reduced travel
- Seamless integration of VAR archiving and review platform
