

Simplified

Football Video Support (FVS) brings video-assisted decision-making to competitions where traditional VAR systems may not be practical or affordable. Designed as a lighter and more accessible alternative, FVS enables referees to review key match incidents while reducing the operational complexity and infrastructure requirements associated with full VAR deployments.

Confidence in every call. Made simple.

Football Video Support (FVS) provides a lighter and more accessible approach to video-assisted officiating. Rather than relying on a dedicated VAR team and a full Video Operations Room, the referee reviews key match incidents directly using available video footage with support from a Replay Operator. Through its challenge-based review process, FVS enables competitions to benefit from video-assisted decision-making while significantly reducing operational complexity and infrastructure requirements.

Key Benefits

- Most cost-effective video-assisted officiating solution
- Easy to transport and deploy
- Minimal infrastructure requirements
- All-in-one audio and video platform (incl. referee radio kit)
- Supports referee training and development
- Ideal for emerging competitions and grassroots football

Technical Considerations

- Different review protocol compared with traditional VAR systems (challenge-based process)
- Fewer review resources than a full VAR operation

Affordability & Accessibility

- Most cost-effective video-assisted officiating model
- Minimal infrastructure requirements
- Designed for competitions with limited resources
- Expands access to video-supported decision-making

Portability & Ease of Use

- All-in-one audio and video platform
- Easy to transport and deploy
- Lightweight design with a total weight of less than 32 kg
- Operated by a single Video Support Operator

Referee Development & Versatility

- Integrated referee training capabilities
- VAR Simulator support for continuous education
- Suitable for football, futsal and youth competitions
- Supports federation-led referee development programmes
