VAR-Flight Cases

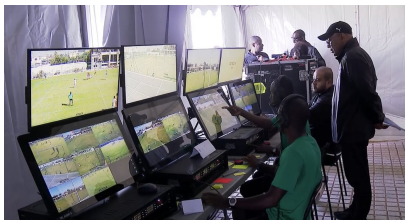

VAR that travels light

A VAR-Flight Case system combines professional officiating technology with maximum portability. Designed for federations, training centres, tournaments and stadium deployments, it provides a flexible VAR environment that can be transported, installed and operated wherever it is needed.

Built to go anywhere

VAR-Flight Case systems are often chosen when flexibility matters most. They enable federations and leagues to rapidly expand officiating capabilities, support referee training programs and deploy professional VAR operations in locations where traditional installations would be impractical or uneconomical.

Key Benefits

- Lightweight and easy to transport
- Cost-efficient deployment across long distances
- SDI and IP-based operational concepts
- Flexible integration of external cameras
- Built-in VAR simulator capabilities
- Ideal for referee training camps and youth tournaments

Technical Considerations

- More on-site setup required than a VAR Van
- Expansion options depend on system configuration

Unmatched Portability & Flexibility

- Lightweight and transport-friendly design
- Modular architecture for rapid deployment
- Global shipment by air, sea or road
- Flexible integration into existing stadium environments

Ideal for Training & Development

- Built-in VAR simulator functionality
- Perfect for referee training camps
- Ideal for youth and developmental tournaments
- Fully stand-alone, including cameras and power

Flexible Deployment & Scalability

- No permanent infrastructure required
- Suitable for temporary or permanent installations
- Ideal extension to Central-VAR operations
- Configurable for different competition requirements
